

ATS Resume/File Keyword Scanner

- Name: Sahil Dhawan
- Gmail: sahil22dhawan@gmail.com
- Company: Sopra steria
- Mentor Name: Abhishek Thapar

Problem Statement

- Companies receive hundreds of resumes daily.
- Manual screening is time-consuming and inconsistent.
- There is a need for a smart tool that scans files for specific job keywords.
- Such a tool would help recruiters shortlist relevant resumes faster.

Objectives

- Develop a Python-based Resume Scanner that:
 - Reads .txt, .pdf, and .docx files
 - Searches for specific keywords (e.g., “Python”, “SQL”, “Excel”)
 - Displays results with  and  indicators

Technologies Used

Component	Technology
Programming Language	Python
GUI Framework	Tkinter
Libraries	PyPDF2, python-docx, os
Output	Keyword Match Summary

Working of the Project

1. User selects a folder containing resumes
2. Enters job-related keywords
3. Program scans each file
4. Matches keywords inside text
5. Displays which resumes matched 

ATS Resume/File Keyword Scanner

 Folder Path:

Browse Folder

 Keywords (comma separated):

 **Start Search**

Output Snapshot

- Show a result box image with  and  marks
- Caption: “The tool instantly identifies which resumes match all entered keywords.”

ATS Resume/File Keyword Scanner

 Folder Path:

/Users/user/Desktop/pyintern

 Keywords (comma separated):

java

 Start Search

```
✓ Found in: /Users/user/Desktop/pyintern/Sahil Dhawan Resume.pdf
✓ Found in: /Users/user/Desktop/pyintern/new ATS RESUME.pdf
✗ Not found in: /Users/user/Desktop/pyintern/new resume.pdf
✗ Not found in: /Users/user/Desktop/pyintern/data2.txt
✗ Not found in: /Users/user/Desktop/pyintern/data.txt
```

Features

-  Supports multiple file formats (.pdf, .docx, .txt)
-  Fast scanning using keyword logic
-  Color-coded result view
-  Simple, minimal GUI
-  Works offline (no internet required)

Learnings

- File Handling & Text Extraction in Python: Understanding the mechanics of processing files and extracting text using Python.
- Building User-Friendly GUIs with Tkinter: Developing intuitive graphical user interfaces for enhanced user experience.
- Applying Automation to Real-World HR Problems: Leveraging automation to solve practical challenges in Human Resources.
- Debugging, Code Organization & User Testing: Best practices for identifying and fixing errors, structuring code, and validating solutions with users.
